Summary	7
Streszczenie	8
Symbols and abbreviations	9
1. Modern condition assessment techniques	13
1.1. Exploitation stresses	14
1.2. Diagnostics methods of electrical equipment	15
1.2.1. Transformer diagnostics methods	16
1.2.2. Electrical machines diagnostics methods	18
2. Diagnostics based on high frequency analysis	20
2.1. High frequency analysis of transformers	21
2.2. High frequency analysis of machine windings	25
3. Modelling and simulations of windings for high frequency analysis ...	28
3.1. Introduction	28
3.2. General characteristic of digital models of windings	29
3.3. Model with distributed parameters of windings	33
3.3.1. Transients in time domain	33
3.3.2. Transients in frequency domain	35
3.4. Lumped parameters model	36
3.5. Multiconductor transmission line model	42
3.6. Parameters of equivalent circuit of windings	49
4. Transfer function based fault discrimination criteria	54
4.1. Introduction	54

4.2. Transfer function based analysis	58
4.3. Transfer function for the deformed transformer windings	61
4.4. Transfer function-based fault discrimination criteria	68
4.4.1. Theoretical basis	68
4.4.1.1. Experimental setup	75
4.4.1.2. Measurement results	77
4.5. Application of high frequency method to assessment of electrical machine winding failures	85
4.5.1. Asynchronous motor	86
4.5.2. Windmill generator winding	91
4.5.3. Results of numerical modelling	95
5. Very fast voltage stresses of transformers insulating systems	98
5.1. Very fast transients	99
5.2. Lightning impulse	100
5.3. Impact of vacuum circuit breakers	102
5.4. Steep frontwave mitigation methods	103
5.4.1. Traditional methods preventing fast transients impact on transformers	103
5.4.2. SmartChoke based transient suppression	104
5.5. Impact of impulse voltage steep-front	111
5.6. Impact of winding patterns	115
6. Analysis of transient voltage distributions in transformer windings at different voltage stimuli	122
6.1. Introduction	122
6.2. Transients in time domain	124
6.2.1. Initial distributions in transformer windings	124
6.2.2. Influence of oil temperature on voltage distributions in transformer windings	126
6.2.3. Initial voltage distributions in transformer windings at different voltage stimulus	127
6.2.3.1. Influence of winding construction on transients ...	134
6.2.3.2. Initial voltage distributions in windings of power transformer at ultra fast stresses	138
6.2.4. Influence of surge magnitude on transient voltages in windings	143

6.3. Frequency characteristics of voltages in windings at different insulation conditions	144
6.3.1. Model windings and measurement setup	144
6.3.2. Influence of oil temperature on frequency characteristics of transformer windings of different constructions	145
7. Impact of resonance overvoltages in transformers on internal insulation systems	152
7.1. Introduction	152
7.2. Investigations of internal overvoltages in the winding of 110 kV ...	153
7.3. Investigations of frequency dependences of overvoltages inside the winding	159
7.4. Internal overvoltages in the winding of 15 kV generated by selected stimulus	165
7.5. Simulation of resonance overvoltages in the transformer windings ...	167
7.6. Spatial resonances in windings	169
7.7. Analysis of selected damages of transformers caused by resonance overvoltages	172
8. Application of transfer function to recognition of resonance overvoltages in transformer winding	175
8.1. Introduction	175
8.2. Transfer based recognition of resonance overvoltage prone zones ...	176
8.3. Investigations of frequency dependences of overvoltages inside the windings	177
8.4. Transfer function based recognition of resonance overvoltage sensitive zones	179
8.5. Simulation of resonance overvoltages in the transformer windings ...	181
9. Transfer overvoltages and frequency signatures of windings for transformers with steel and amorphous core	184
9.1. Introduction	184
9.2. Characteristic of experimental transformers	185
9.3. Measurement results	188
9.3.1. The 20 kVA transformer with silicon steel core	188
9.3.2. The 160 kVA transformer with silicon steel core	191
9.3.3. The 33 kVA transformer with amorphous magnetic core	193

10. Assessment of manufacturing processes based on FRA	198
10.1. Introduction	198
10.2. Theory and measuring technique	198
10.3. Results of investigations	200
Literature	207
Index	221
